

APRENDENDO **GIT E GITHUB**

Ola!

Meu nome é Ana Bastos

Sou engenheira de software e cientista da computação.

anabastos

@naluhh

@anapbastos

**Talvez você já tenha
passado por isso...**

Trabalho1.doc

Trabalho2.doc

TrabalhoFinal.doc

**TrabalhoFinal
Mesmo.doc**

**TrabalhoFinal
MesmoAgoraVai.doc**

**Ou talvez você tenha tido
problemas pra outras
pessoas mexerem em um
arquivo só...**

Pro desenvolvimento existe uma solução!

Git é um sistema de controle de versionamento de projetos e é uma ferramenta essencial para desenvolvedores.

Com ele podemos criar versões de um arquivo com cada modificação salvando todas as diferenças entre os arquivos e pastas e ainda mantendo um histórico de tudo que foi modificado em cada versão.

Foi criado em 2005 pelo Linus Torvalds para o desenvolvimento do Kernel do Linux.

FUNFACT: *Git* é uma expressão inglesa que significa “Pessoa desagradável” e de acordo com o Linus ele se referia a si mesmo quando deu esse nome.

"the stupid content tracker"

O Git permite que você revise e escale seu projeto sem precisar ficar restaurando os estados de arquivo passados, além de ajudar muito quando estamos trabalhando em grupo.

“Criei o arquivo txt inicial”

test.txt

Oi tudo bom

Meu nome é ana luiza

Esse é o rladies 2018

Quando outra pessoa for editar...

test.txt

“Editei ano e adicionei
meu nome”

Oi tudo bom

Somos julia e ana luiza

Esse é o rladies **2019**

test.txt

Oi tudo bom
Meu nome é ana luiza
Esse é o rladies 2018

versão 1

Oi tudo bom
Somos julia e ana luiza
Esse é o rladies **2019**

versão 2

test.txt

Oi tudo bom
Meu nome é ana luiza
Esse é o rladies 2018

Oi tudo bom
Meu nome é
Somos julia e ana luiza
Esse é o rladies **2019**

1- Criei o arquivo txt inicial

2- Editei ano e adicionei meu nome

Fica fácil na hora em que alguém for colaborar com modificações no projeto possibilitando até mesmo que duas pessoas mexam no mesmo arquivo.

COMO

COMEÇAR?

Instalar git

The screenshot shows the Git website homepage. At the top left is the Git logo (a red diamond with a white branching diagram) followed by the text "git --fast-version-control". To the right of the logo is a search bar with the placeholder text "Search entire site...". Below the logo, there is a navigation menu with links: "About", "Documentation", "Downloads" (highlighted in red), "GUI Clients", "Logos", and "Community". Below the navigation menu, there is a section titled "The entire Pro Git book" which mentions it was written by Scott Chacon and Ben Straub and is available to read. The main content area is titled "Downloads" and features three operating system options: "Mac OS X" (with an Apple logo), "Windows" (with a Windows logo), and "Linux/Unix" (with a penguin logo). Below these options, a text block states: "Older releases are available and the Git source repository is on GitHub." To the right of the "Downloads" section is a large image of a computer monitor displaying the "Latest source Release 2.22.0" and a button that says "Download 2.22.0 for Mac".

git --fast-version-control

Update route titles (#11)

Open RMacfarlane wants to merge changes from auchenberg:tweaks to auchenberg:master. a day ago

This PR updates our route titles to simplify them a bit. Please share your input

< Kenneth Auchenberg: Update route titles b282410

RMacfarlane reviewed a day ago

```
routes/index.js
39 39 var cart = new Cart(req.session.cart);
40 40 res.render('cart', {
41   - title: 'NodeJS Shopping Cart',
41   + title: 'Shopping Cart',
```

RMacfarlane a day ago

Is it too generic?

Configurar o Git

```
git config --global user.name "Ana"  
git config --global user.email "analpbastos@gmail.com"
```

Supondo que você quer começar um
projeto novo

O propósito do git é lidar com um projeto, que é um conjunto de diversos arquivos que serão modificados através do seu desenvolvimento.

git init

Cria um novo repositório

Salva toda a estrutura de pastas e arquivos em um "repositório", que é o nosso ambiente de trabalho.

```
mkdir test
```

```
cd test
```

```
git init
```

test/

“Ok, vou olhar pra essa pasta
test vazia”

git status

Lista todos os arquivos que foram modificados e arquivos novos que foram criados.

```
[n] ~/P/tutorial-web ③ master ○
```

```
➤ git status
```

```
On branch master
```

```
Your branch is up to date with 'origin/master'.
```

```
nothing to commit, working tree clean
```

```
[n] ~/P/tutorial-web ③ master ○
```

Adicione um arquivo a esse repositório

test.txt

Houveram mudanças no meu repositório vazio!

```
git status
```

[n] ~/P/gittest HEAD ○

➤ **git status**

On branch master

No commits yet

Untracked files:

(use "git add <file>..." to include in what will be committed)

test.txt

nothing added to commit but untracked files present (use "git add" to track)

Ok. Quero colocar essa modificação no meu repositório!

git add

```
git add test.txt
```

```
git status
```

Staging x Environment

```
[1] ~/gittest *HEAD (v1.0.0)
> git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)

    new file:   test.txt
```

O git add coloca sua modificação para “Staging”

Tudo o que está em staging é o que você quer que seja “Commitado”

git commit

Commit é de fato o registro de quais arquivos você modificou incluindo todas as mudanças como adicionar ou modificar arquivos.

Pega todas as modificações em staging e cria um estado que você pode voltar atrás a qualquer momento.

```
git commit -m "Criei o arquivo test.txt"
```

Nomes de commit

O que devo commitar?

- Pensa em algo que precisa ser arrumado ou adicionado
- Faça funcionar.
- Teste o que foi feito
- Adicione o commit.

```
create mode 100644 test.txt
```

```
[n] ~/P/gittest ↻ master ○
```

```
➤ git status
```

```
On branch master
```

```
nothing to commit, working tree clean
```

git log

```
➤ git log
```

```
commit abc9565e10e8b5ba6894903701dd3f5c792e60f1 (HEAD -> master)
```

```
Author: Ana <ana.bastos881@gmail.com>
```

```
Date: Tue Jul 2 19:17:59 2019 -0300
```

```
Add test.txt

**E assim funciona um
work flow comum**

Add: Adicionar em staging

Commit: Criar um novo estado
com uma mensagem descritiva

Push: Adicionar ao remoto

Pull: Atualizar meu repositório

Status: Status de arquivos modificados e o que está em staging para ser commitado

Log: Todos os commits

Diff: Mudanças entre o último commit e o que eu fiz

Geralmente sua parte do trabalho não é um commit só mas sim algo que você vai trabalhar durante dias.

Ao invés de todos os colaboradores darem push toda hora no mesmo código é possível criar versões do mesmo projeto.

Pra isso geralmente a gente mantém sempre uma versão “Principal” do código chamada Master e separa em “branches” as versões de cada funcionalidade.

git branch

```
git branch -B "feat/adicionar-poema"
```

git branch

- master
- feat/adicionar-poema

```
git add test.txt
```

```
git commit -m "Iniciar o poema"
```

```
git push
```

Oi tudo bom

Somos julia e ana luiza

Esse é o rladies 2019

Rosas são vermelhas

Violetas são azuis

```
git add test.txt
```

```
git commit -m "Acabar o poema"
```

```
git push
```

```
Oi tudo bom
```

```
Somos julia e ana luiza
```

```
Esse é o rladies 2019
```

```

Github serve para compartilhar códigos com outros desenvolvedores.

Enquanto o Git funciona na sua máquina local, o Github é como se fosse um repositório remoto na web para todos os projetos de código.

Vincular ao seu Git Instalado

Pra isso usa-se uma chave ssh

```
ssh-keygen -t rsa -C "your_email@example.com"
```

```
Generating public/private rsa key pair.  
Enter file in which to save the key (/Users/Angela/.ssh/id_rsa): aaaaaaaaaa  
Enter passphrase (empty for no passphrase):  
Enter same passphrase again:  
Your identification has been saved in aaaaaaaaaa.  
Your public key has been saved in aaaaaaaaaa.pub.  
The key fingerprint is:  
SHA256:/WDBXz5f73cncBH/IVHq1IcYYgZRjY8bHyUVfZMUvz0 your_email@example.com  
The key's randomart image is:  
+---[RSA 2048]---+  
|      o+=0..0+=+0|  
|      oo.ooo+=+0|  
|      =.0=0++|  
|      + =0+0.+|  
|      S B o.+E=|  
|      o +. .0=|  
|      .o  o|  
|      ..+|  
|      .|=|  
+-----[SHA256]-----+
```

```
ssh-keygen -t rsa -C "your_email@example.com"
```

```
pbcopy < ~/.ssh/id_rsa.pub
```

PULL REQUEST

PR é enviar uma modificação para um repositório remoto no Github.

É um meio de alertar os donos do repositório que você quer fazer algumas mudanças no seu código.

Ele possibilita que ele dê um review no código e possa falar se ele quer colocar, ou o que precisa ser modificado pra ele colocar no projeto dele.

Solve Exercism.io Exercises Using Functional Languages #8

[Edit](#)[New issue](#)[Open](#)

anabastos opened this issue on 1 Oct 2018 · 9 comments

anabastos commented on 1 Oct 2018

Member

We are solving functional programming exercises together, you can help us by sending some exercises from exercism.io in any of these languages:

- Clojure
- Elixir
- Elm
- Haskell
- Scala
- Lisp
- Erlang
- Purescript
- F#
- Scheme.

Also, you can join our study group: https://t.me/joinchat/CW_t_UBMQLKQ1sEcnQHRxg

Happy Hacking! 🎉 🍊 🤖
